

## Large Section Timber Frames and Structures

### CPD for Architects & Engineers

Carpenter Oak & Woodland have been supporting architects and engineers with its specialist knowledge and experience for nearly 20 years. We design, manufacture and erect large section timber frames and have always relied on the relationships we have with other professionals to enable us to be involved in some of the most exciting projects in the UK. From the very traditional to the very contemporary; whether the design relies on 800 year old or cutting edge technology we have the expertise and experience to support you.

This seminar, run in conjunction with the Norfolk Association of Architects, is for those who want to develop their understanding of the use of large section timber frames and structures, from conception through to completion. Overall a valuable learning experience for those working or wishing to work with timber framed structures. During the seminar we'll take you through some of the key considerations, including;

- Defining large section timber framing
- Why build in timber?
- Which timbers can be used?
- How to build in timber?
  - Layout, frame elements & jointing
  - Frame types and styles
- Key issues
  - Cost drivers
  - Shrinkage & deflection
  - Aesthetics & treatments
  - Eco credentials
